## Location of Sewer Service Connection

Where possible, we try to accommodate property owners and to locate service lines at a point best suited to the present plumbing and site conditions (driveways, landscaping, etc.). With respect to this matter, we are requesting that you please indicate on the enclosed form the location of:

- where the existing sewer pipe comes out of the house,
- septic tanks, cesspools, leaching fields,
- existing driveways, sidewalks, large trees,
- water line, gas line,
- shed, and/or garage, if any,
- and the location at which you wish to have your sewer connection enter the house (if different from the existing sewer pipe location).

We suggest that it may be helpful, but not necessary, to seek the assistance of a licensed plumber and/or drain layer to aid you in supplying the information requested. The following example is provided to assist you in completing the card.

### EXAMPLE

If not returned, the engineer, from Camp, Dresser & McKee will determine the location of the sewer service stub.

No connection from the sewer main in the street to the property line will be changed and/or added after construction is completed.

Storm water, surface water, ground water; roof runoff, submerged drainage and/or sump pumps may not be discharged into the sanitary sewer.

Thank you for your cooperation.
